## **REESE TOWER SERVICES ACQUIRES INDUSTRIAL RATED sUAS**

**Drums, PA** – Reese Tower Services is pleased to announce the addition of a DJI Matrice 210 with the Zenmuse Z30 to their fleet of sUAS.

The Matrice 210 is an industrial small unmanned aerial system (sUAS) that offers superior capabilities that includes better wind resistance and an IP43 water resistance rating. The Zenmuse Z30 is a powerful 4K camera with 30x optical zoom and 6x digital zoom resulting in a total magnification of 180x. The combined platform of the Matrice and Z30 will let RTS provide the highest quality inspections, photos, and videos to their current and future customers in addition to giving the company the capability to fly in adverse weather conditions when required.

Additionally, since the sUAS will have 30x optical zoom, the company will be able to maintain a larger flying distance from a structure and its critical components, allowing RTS to safely capture the data required. The zoom capabilities will allow the ability to closely observe the overall structure quality, where other sUAS are limited by the quality of their cameras and how closely you can fly to the structure.

Vice President Jeremy Klapac said, "We're very pleased with this new addition to our current fleet. With the industrial capabilities of the Matrice 210, partnered with the zoom power of the Zenmuse Z30 camera, we're able to add a host of additional capabilities to this growing business segment." "I'm excited to be able to offer our customers this expanded capability," added Brian Reese, President. "With the Matrice and the Z30 we will be able to offer our current and future customers leading edge technology. We've now enhanced safety in two crucial areas: by preventing any unnecessary climbing and being able to deliver enhanced close-up images of a tower while being 20-50 feet if not more away."

**About Reese Tower Services:** Operating across North America, RTS assists in maximizing the value of vertical assets by structural enhancements, inspections, and maintenance. RTS's expertise lies in its years of experience with tower structures from engineering through manufacturing, installation, and field modifications for repair and/or to enhance structural capacity. RTS is an expert in ground-based and safe aerial inspections including condition assessments, retrieving engineering data, performing weld inspections, and non-destructive weld testing.
